CensiTrac™ Load Management

Simplify Sterilization Documentation. Strengthen Every Step.

Simplify sterilization load documentation with a streamlined, single-screen workflow designed to reduce manual entry, improve documentation accuracy, and support consistent processes. With built-in validation and automated data population, CensiTrac Load Management helps SPD teams document loads more efficiently while supporting quality assurance and compliance efforts.

What Changes for Your Team

Simplified Load Documentation

CensiTrac's Load Management workflow has been redesigned into a single-screen experience that walks technicians through the entire documentation process. Required fields, built-in validation, and scan-driven population of key data help ensure loads are documented accurately and efficiently every time.

Biological Indicators, Integrated Into the Workflow

Keep biological indicator documentation within the load management workflow, reducing the need to switch between screens. This streamlined approach helps technicians capture critical information more consistently while supporting accurate load records.

Built-In Quality Assurance

Identify missing or incomplete documentation before records are finalized with built-in validation, required fields, and quality checks. These safeguards help reduce rework, support documentation accuracy, and strengthen audit readiness.

Faster Documentation with Smart Data Population

Spend less time on repetitive data entry with a scan-driven workflow that populates relevant load information based on site- and machine-specific requirements, while allowing technicians to maintain the scanning and interfacing workflows they already use.

Greater Visibility and Consistency

Standardize load documentation across technicians, shifts, and locations while giving SPD leaders greater visibility into documentation quality. Consistent workflows and quality assurance information help teams identify gaps and support continuous improvement.

CensiTrac™ | Load Management Workflow

Built on CensiTrac

CensiTrac provides surgical instrument tracking from decontamination through sterilization and delivery to the OR. Load Management has always been part of it. What has changed is the experience: a modernized, streamlined workflow that makes load documentation easier to complete and easier to get right.

Safety Guardrails

Configurable safeguards support critical processing requirements, including method matching, required testing, use limits, and indicator verification. System-enforced stops help prevent trays from advancing before required conditions are met.

Sterilization Documentation

Maintain structured sterilization records with unique cycle numbers and documented processing information. CensiTrac helps teams support traceability, documentation consistency, and audit preparation throughout the sterilization workflow.

Reporting & Productivity

Turn sterile processing data into actionable insights with CensiTrac Intelligence. Access reporting capabilities that help leaders evaluate productivity, identify trends, and make more informed operational decisions.

Digital Count Sheets

Streamline tray assembly with digital count sheets with photos, critical-item flags, and special instructions. Access manufacturer IFUs and document missing instruments to support more consistent assembly and communication with the OR.

OR Readiness

Support surgical readiness with processing priorities informed by the surgical schedule and case-specific pick lists based on surgeon preference cards. Shared quality feedback helps strengthen communication between SPD and the OR.

Security & Traceability

CensiTrac remains the only instrument tracking solution that is HITRUST-certified, ensuring customer data is safeguarded with industry-leading cybersecurity standards.

Trusted Experience in Sterile Processing

What leaders are saying about CensiTrac Load Management

STERILE PROCESSING MANAGER AT A LARGE MEDICAL IDN

"Consolidating load and biological documentation onto a single screen reduces errors from screen switching and missed entries."

DIRECTOR OF CENTRAL STERILE PROCESSING AT A LARGE, MULTI-STATE INTEGRATED HEALTHCARE SYSTEM

"Quality issues and missing documentation are often discovered after the fact, which creates additional audit risk and corrective action efforts."

Ready to Simplify Load Documentation?

See how the updated Load Management workflow in CensiTrac can help your team improve efficiency, documentation accuracy, and workflow consistency.
